Abstract— Sigma delta modulators ($\Sigma\Delta$ M) form part of the core of today's mixed-signal designs. The ongoing research on these devices shows the potential of $\Sigma\Delta$ data converters as a promising candidate for high-speed, high-resolution, and low-power mixed-signal interfaces. This paper addresses the design of a fourth-order multi-bit sigma-delta modulator suitable for Wireless Local Area Networks (WLAN) receivers with feed forward path and the optimum coefficients were selected using genetic algorithm (GA) -based search method.

Keywords- $\Sigma\Delta$ M, fourth order $\Sigma\Delta$ M, GA, WLAN.
